How the Microbe Would Appear If Magnified in Size to Correspond With Its Power.

The world has always believed in monsters—great dragons of the land, and huge screents of the sea, As a rule these monsters have been fairly peaceable, and beyond frightening people occasionally, they have done little recorded harm. The real calamities of humanity have come from the smallest forms of life. The minute microbe has slain its millions upon millions. If this microscopic form of life were depicted in size and form equal to its danger and
